                                                                 NOTE: Estimated insert size may differ from sequence length (see http://ww.hgsc.bcm.tmc.edu/docs/Genbank draft data.html).
NOTE: This is a 'working draft' sequence. It currently consists of 15 contids. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     121 ATAAACTGGGAAGAGGACAGAGGACAGGCTCAAGGAACATATTTAAGGACTGGGTAGAAA 180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                NOTE: This is a 'working draft' sequence. It currently consists of 21 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Center code: WIBR

REFERENCE

Submitted (29-7AN-2003) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA On Jan 1, 2003 this sequence version replaced gi:23334682.

INFORMATION: http://www.ngsc.bcm.tmc.edu/ or email

CLONE LENGTH: This sequence does not necessarily represent the entire insert of this clone. Overlapping regions of clones are only sequenced and submitted once, so the sequence for the remainder of the insert may be found in the record for the adjacent clones. Overlapping clones are noted at the beginning and end of the Features listing.

SYSS are identified using ePCR (Genome Res. 7:541-550) searches of a local database that includes entries from dbSTS, GDB, and local mapping efforts.

Repeats are identified using RepeatMasker (A. Smit and P. Green, unpublished.) for Human and Mouse sequences.

Genes and Region of sequence similarity are identified by BLAST (Muc. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the EST and cDNA sequences. Genes demonstrate at least two exons flanked by consensus splice sites that maintained sequence continuity across the splice junctions. Sequences that are not identical matches are annotated as similar.

SEQUENCING READ COVERAGE:Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality for a region does not meet this standard, it will be indicated in the annotation as Low Coverage.

http://www.hgsc.bcm.tmc.edu:8088/quality.info/genbank.annotation.ht ml. QUALITY OF INDIVIDUAL BASES:This sequence meets stringent quality standards - estimated error rate less than 1 per 10,000 bases. Reports of lowest quality individual bases and measures of base quality are listed below. Description of the metrics can be found GRL

NOTE: This is a 'working draft' sequence. It currently consists of 7 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                 Direct Submission

Clone CTB-38X21 is from the first release of the human BAC library CITB-978SK-B. The library contains cloned DNA from the male fibroblast call line 9785K. See: Shizuya et al., Proc. Natl. Acad. Sci. USA 89:8794-7 (1992); U-J. Kim et al., Genomics 34:213-8 (1996). This clone is available from Research Genetics, Inc.
                                                                                                                                                                                                                                                                                                             This sequence was generated from part of bacterial clone contigs of human chromosome X, constructed by the chromosome X mapping group at the Sanger Centre, Wellcome Trust Genome Campus, Hinxton, UK. Purther information can be found at http://www.sanger.ac.uk/HGP/ChrX/
                                                                                           This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry. Or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.
clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The clone sequenced to the right is RP3-327A19, 200 base pair overlap. Actual start of this clone is at base position 1 of CTB-38K21, actual end is at base position 9416 of RP3-327A19. Location/Qualifiers

TITLE JOURNAL

COMMENT

\* NOTE: This record contains 68 individual
\* sequencing reads that have not been assembled into
\* contiggs. Runs of N are used to separate the reads
\* and the order in which they appear is completely
\* arbitrary. Low-pass sequence sampling is useful for
\* identifying clones that may be gene-rich and allows
\* overlap relationships among clones to be deduced.
\* However, it should not be assumed that this clone
\* will be sequenced to completion. In the event that
the record is updated, the accession number will
\* be preserved.

1054: contig of 954 bp in length 1054: gap of 100 bp 2105: gap of 100 bp 3171: gap of 100 bp 3171: gap of 100 bp 4124: contig of 966 bp in length 4124: contig of 933 bp in length 4224: gap of 100 bp 5207: contig of 933 bp in length 5207: contig of 933 bp in length 5307: gap of 100 bp 6303: contig of 936 bp in length 7438: gap of 100 bp 7438: gap of 100 bp 8432: contig of 936 bp in length 8432: contig of 936 bp in length 9498: contig of 966 bp in length 9598: gap of 100 bp

JOURNAL
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    REFERENCE
Baylor Plaza, Houston, TX 77030, USA
On Sep 19, 2002 this sequence version replaced gi:21909357.
The sequence in this assembly is a condination of EAC based reads and whole genome shorgun sequening reads assembled using Atlas and whole genome shorgun sequening reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). As a result, the sequence may extend beyond the ends of the clone and there may be contigs that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence contigs will be indicated in the feature table.

Centify a will be indicated in the feature table.

NOTE: This is a 'working draft' sequence. It currently consists of 2 contigs. The true order of the pieces is not known and their order in his sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

(see http://www.hgsc.bom.tmc.edu/docs/Genbank_draft_data.html)

**NOTE: This is a 'working draft' sequence. It currently

**Consists of 1 contigs. Gaps between the contigs

**are represented as runs of N. The order of the pieces

* is believed to be correct as given, however the sizes

* of the gaps between them are based on estimates that have

**provided by the submittor.

* This sequence will be replaced

* by the finished sequence as soon as it is available and

Submitted (31-JUL-2011) Sanger Centre, Hinxton, Cambridgeshire, CBM0 1SA, UK. E-mail enquiries: humquery@sanger.ac.uk Clone requests: clonerquet@sanger.ac.uk

On Aug 1, 2001 this sequence version replaced gi:14575076.

During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation amnotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above. This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by resolved primary accession numbers given in the feature table with their source databases: Em. EMBL, Sw:, SWISSRROT; Tr:, TREMBL, WE., NORWERP; Information on the WORMERP database can be found a with their source databases: Em. Further information can be found at http://www.sanger.ac.uk/HGP/Chr13 Rp11-121019 is from the library RPCI-11.1 constructed by the group of Pieter de Jong. Por further details see http://www.chori.org/bacpac/home.htm
VECTOR: pBACGS.6
IMPORTANT: This sequence is not the entire insert of clone RPI1-121019 It may be shorter because we sequence overlapping sections only once, except for a 100 base overlap. The true right end of clone RPI1-121019 is at 126262 in this sequence. The true left end of clone RPI1-469L23 is at 55054 in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       191386

NOTE: This is a 'working draft' sequence. It currently consists of 22 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      65338; gap or unknown remptum 139 65338; gap or unknown length 75264; contig of 9926 bp in length 165 75364; gap of unknown length 165 91539; contig of 16475 bp in length 11316; contig of 18677 bp in length 117 11416; gap of unknown length 187 11416; gap of unknown length 147 11537; contig of 18621 bp in length 14783; contig of 18621 bp in length 1838 4789; contig of 1852 bp in length 1890 150390; contig of 1850 bp in length 150490; gap of unknown length 15240; contig of 1750 bp in length 152340; contig of 1750 bp in length 152340; gap of unknown length 152340; gap of unknown length 155185; contig of 2845 bp in length.
